PROFESSIONAL SUMMARY

App & Web Team Lead with **5+ years** solving operational and revenue problems for financial services firms through in-house software. At Century Financial I identified costly gaps in field productivity, document management, HR operations and client trust, then designed and shipped the systems that closed them — cutting vendor costs, automating compliance workflows, and giving Relationship Managers real-time tools to sell more effectively. Strong across the MERN stack, Flutter, Python (Django) and AWS, with hands-on experience integrating payment gateways, VoIP and AI into production fintech systems.

CORE SKILLS

Languages	JavaScript/TypeScript (React.js, Node.js, NestJS), Dart (Flutter), Python (Django), PHP	**Cloud & DevOps**	AWS (Lambda, EC2, S3), Microsoft Azure, Docker, NGINX, Firebase (FCM)
Databases	MongoDB, PostgreSQL, MySQL, Redis, DynamoDB, AWS S3	**Integrations**	Stripe, Google Pay, M-Pesa, 3CX VoIP, WebSockets (real-time)
AI & Emerging	OpenAI API, ElevenLabs, Claude agents & workflows, Whisper/ONNX, VR (Meta Quest 4)	**Leadership**	Agile/Scrum, team management (5+), QA strategy, API optimization, cost engineering

PROFESSIONAL EXPERIENCE

App & Web Team Lead

Jul 2023 — Present

Century Financial Consultancy, Dubai

- Relationship Managers had no way to manage leads or client calls off-site. Architected the company's first mobile and web application ecosystem from the ground up, enabling remote lead and call management and driving a **40% increase in field productivity**.
- Business and trading-floor requirements were reaching engineering informally with no roadmap. Led a **5-member cross-functional team** (3 developers, 1 QA, 1 support), translating requirements into technical roadmaps and API optimization strategies that improved system response times **30%**.
- Document management costs had grown to **$11,000/year** through a legacy vendor. Executed a migration to Docuseal, cutting costs to **$200/month** (over 80% savings) while maintaining compliance and operational continuity.
- HR and payroll data was scattered across third-party SaaS tools with recurring subscription costs. Architected and deployed an **in-house HRMS and payroll platform**, centralizing employee data and eliminating those recurring expenses.
- Relationship Managers lacked visibility into live client trading activity. Built real-time financial dashboards over **WebSockets** surfacing client P&L, instrument heatmaps and peak trading activity — a **28% increase in sales efficiency**.
- Clients were less likely to answer calls from unfamiliar numbers. Integrated **3CX VoIP** into the Flutter app so outbound calls route through trusted office extensions, improving call-answer rates and lead trust **35%**.
- KYC and transaction monitoring relied on slow manual review, creating onboarding friction. Engineered Python automation for **KYC and Transaction Monitoring Systems**, cutting processing time **50%** while maintaining regulatory compliance.
- Trading platforms and internal dashboards were prone to data drift. Built intelligent **MT5 configuration uploaders** and Python synchronization scripts, achieving **99.7% data consistency** between systems.
- Financial and payroll modules had no formal testing process. Established the department's **QA framework** and standardized test case formats, achieving **100% test coverage** on critical modules.
- Delivery on Century Connect needed a single accountable owner. Served as **project lead** — owning application security hardening, server provisioning and management, and the code-review gate every release passes through.
- Repetitive engineering work was consuming senior capacity. Introduced **AI-assisted development with Claude** — building custom agents and multi-step workflows for code review, migrations and test scaffolding — and now **conduct internal sessions** on using Claude in VS Code efficiently.
- A health-tech product needed a way to keep users active daily. Designed a **"Step-to-Earn"** engagement module rewarding activity with in-app incentives, increasing daily active user retention **20%**.
- Customer onboarding and notifications were handled manually. Integrated **Microsoft Email automation** into the onboarding flow, eliminating manual workflows and saving **15+ administrative hours per week**.

Lead AI & Full Stack Developer
Freelance — Jan 2020 — Jan 2025

- A training client needed a more immersive way to teach hands-on skills remotely. Engineered a **VR learning platform** for Meta Quest 4, integrating the ChatGPT API and ElevenLabs for real-time conversational voice feedback and achieving a **90% user immersion score**.
- A Kuwait-based client needed a scalable mobile game with live competition features. Served as lead and backend developer on a Flutter puzzle game, architecting game logic, real-time scoring and backend services built for growing user concurrency.
- An e-commerce client's backend couldn't handle demand spikes without downtime. Implemented a high-availability **serverless backend** on AWS Lambda and DynamoDB, absorbing **300% traffic spikes** with no downtime or added cost.

Flutter Developer
YouCloudPay (Sobha Realty), Dubai — Aug 2022 — Jul 2023

- The platform needed to reach customers across multiple emerging-market payment methods. Integrated multi-channel gateways including **MPay, M-Pesa and Orange Money**, expanding merchant reach **30%**.
- Merchants needed a faster, lower-friction checkout. Designed and developed the **YouShop ERP** platform with QR-based ordering and Firebase-powered real-time sync, reducing checkout friction **22%**.

Frontend Developer
Technic Mentors — Dec 2021 — May 2022

- Client projects needed secure, scalable interfaces across web and mobile. Developed responsive web interfaces and cross-platform mobile applications, implementing Google Authentication and RESTful API integrations for secure session flows.

KEY PROJECTS

- **uPro CRM & In-House HRMS** — Proprietary all-in-one CRM and enterprise platform centralizing Sales, HRMS, IT, Compliance and Support, replacing multiple third-party SaaS systems and delivering **$50,000+ in annual savings** with full ROI within 14–18 months.
- **uPro Plus (Mobile CRM & Workforce Enablement)** — Consolidated CRM, HRMS, real-time lead alerts and 3CX VoIP calling into a single mobile app for field Relationship Managers, increasing daily adoption through gamified wellness features.
- **Century Connect** — Led delivery as project lead, owning application security, server management and code review across every release.
- **Tenure (Multi-Tenant HRMS Platform)** — NestJS, MongoDB, Redis and Flutter product spanning the full employee lifecycle across 20 modules, with SAML/SCIM SSO, per-tenant white-labeling, plan-gated billing and a versioned Client API with outbound webhooks.
- **UAE E-Invoicing & Accounting Platform** *(in development)* — Multi-tenant accounting and **PINT AE e-invoicing** over the Peppol network via an Accredited Service Provider to the Federal Tax Authority. pnpm/Turborepo TypeScript monorepo with ledger, tax-engine, PINT AE and ASP-gateway packages behind a NestJS API on Drizzle and PostgreSQL 16, plus a build-failing money guard enforcing decimal-safe money (NUMERIC(19,4), never a JS float).
- **ERP Codeloci (Retail ERP)** — Multi-store ERP across eleven modules — products, stores, customers, suppliers, purchases, sales, orders, returns, discounts and users — with centralized stock movement, decimal-safe money handling and JWT refresh-token rotation.
- **YouShop App** — End-to-end multi-merchant retail management system with integrated digital payments and low-friction workflows for vendors and customers.
- **Nova — Offline Voice Agent** — Fully **offline** voice control for macOS (no cloud STT, no API keys): faster-whisper on CPU behind a four-layer hallucination filter, plus speaker verification via a Resemblyzer encoder exported to **ONNX** — bit-identical to the PyTorch original and 40× faster at 0.04s per check — with a finite, config-declared action set as the security boundary.
- **AI VR Tutor (Meta Quest 4)** — VR-based AI learning system combining the ChatGPT API with real-time voice feedback for immersive, conversational learning.
- **RM Trust-Call App** — Flutter application integrating 3CX VoIP for trusted outbound calls, with lead-management features that improve customer trust.

EDUCATION & AWARDS

BS, Software Engineering — Gold Medalist
Gift University

Best Nucleus Staff Award
Century Financial Consultancy

Dean's Award — 6 Consecutive Semesters
Gift University

CERTIFICATIONS

AWS Certified Cloud Practitioner (CLF-C02)
In Progress

AWS Knowledge: Cloud Essentials
